

Installing your Certificate on Hsphere

Please follow this instruction if you have already purchased a certificate directly from Comodo and need to install it through H-Sphere. If you want to buy and install Comodo certificate in one step directly from H-Sphere, refer to H-Sphere documentation at <http://www.psoft.net/HSdocumentation/user/comodo.html>

Before installing existing certificate in H-Sphere, make sure you:

- Have your CSR and private key copied and stored.
- When requested, enter the CSR signing request that you have saved.
Important: When obtaining SSL certificate, make sure it is generated for Apache regardless of whether you intend to install it on Winbox or Unix box.

Now go to H-Sphere and do the following:

1. Click *SSL* on your user Control Panel home page.
2. Go to the *Web Service* page and click the *Import SS Certificate* link in the *SSL* field.
3. Enter the certificate you received from Comodo into the upper *Install Certificate based on previously generated Certificate request* box of the form:

Edit SSL	
Site Name	unixtest.test190.psoft
Install Certificate based on previously generated Certificate request	Certificate File: <div style="border: 1px solid black; height: 100px; width: 100%;"></div>
	<input type="button" value="Upload"/>

4. Click *Upload*.
5. Enter your intermediate CA certificate into the *Certificate Authority File* box (for H-Sphere 2.5. Patch 6+):

6. Click *Install*.
7. Now you can use the certificate jointly with the private key you have saved.
