

Plesk 7 & 8 Certificate Installation

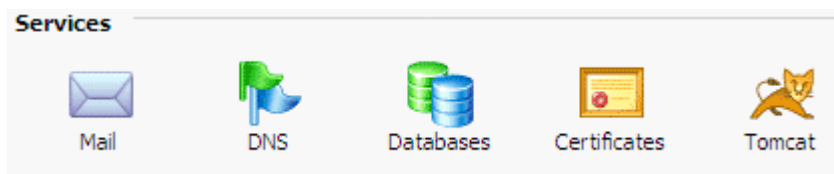

Login to the Plesk 7 Control Panel.
From the left hand menu, select 'Domains'

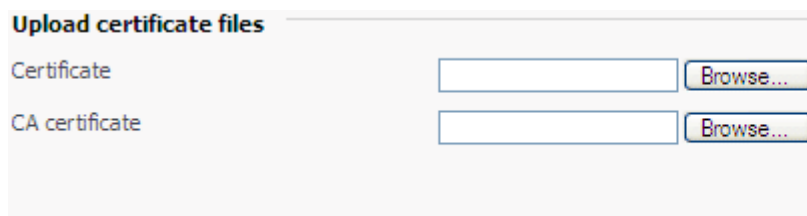

Click on the domain name that the certificate is for

Click on the 'Certificates' menu item.

There is a button in the middle of the page labelled 'Browse'. Click 'Browse' and navigate to the location of the saved site certificate you received from Comodo. Selecting it, then select 'Send File', this will upload and install the certificate against the corresponding Private Key

The certificate name will now appear in the list of certificates at the bottom of the page

Click on the name of the Certificate from the list.

The box on the page labeled 'CA Certificate'. You will need to paste both the Intermediate CA certificate and Root certificates from the .zip file you have received into this box.

Upload certificate as text

Certificate

CA certificate

They must be pasted this in order, the Intermediate CA certificate first, followed by the Root certificate, the result will look similar to the example below (Please note: no blank line between then end of one certificate and the start of the next):

```
-----BEGIN CERTIFICATE-----
MIIEyDCCBDGgAwIBAgIEAgACmzANBgkqhkiG9w0BAQUFADBFMQswCQYDVQOGewJV
UzEYMBYGA1UEChMPR1RFIENvcnBvcnF0aW9uMRwwGgYDVQQDEExNHVEUgQ3liZXJl
.....

bW1EDp3zdHS01TRJ6V6e6bR64eVaH4QwnNOfpSXY
-----END CERTIFICATE-----
```

Click the 'Send Text' button.

Now click 'Up Level' from the top right of the screen and choose 'Setup'

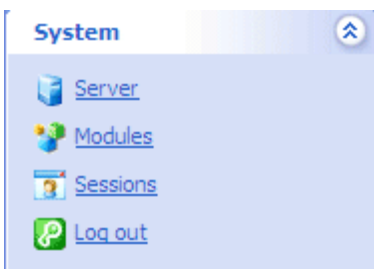

At the top of the page, change the 'SSL Certificate' drop-down menu to the certificate you have just installed.

IP Address

IP Address	77.77.77.77 Shared
Certificate	default certificate (Administrator's repository)

**NOTE: The example above shows a shared IP.
If there is no Certificate drop-down box on the screen, this means that you are on a shared hosting account, therefore you need to upgrade your hosting package and purchase a dedicated IP address from your hosting provider**

Click the 'Server' item from the left hand menu

Click on the 'Service Management' menu item

You now need to Stop and Start the Apache process

Services management

Services

- ▶ Web Server (Apache)
- ▶ SMTP Server (QMail)
- ▶ IMAP/POP3 Server (Courier-IMAP)

NOTE: Restarting Apache will NOT work. You must stop the service, then start it again to complete the installation

NOTE: When you add a certificate, it is not installed automatically onto the domain or assigned to an IP address, but only added to the Certificate repository.
